## Experience

**Revela** Detroit, MI

*Software Engineer II (Integrations Lead)* *Aug 2024 – Present*

- Architected and built a reusable integration framework that standardizes auth, API configuration, and webhook safeguards including header validation, partner allowlisting, and idempotency checks, cutting standard integration time by 75% to one week.
- Co-led a two-month zero-downtime migration to a new payments provider that now processes $100M+ per quarter. Grew referral fee revenue 4x over the legacy provider and cut payment support tickets by 50%.
- Reduced failed-payment incidents by 33% with automatic payment status checks and secured our payment provider's commitment to build server-side idempotency for payment creation.
- Delivered the end-to-end migration of document signing from an in-house system to a third-party platform in four weeks, saving Customer Support 50 hours per month and up to 200 during peak season.
- Hardened account security for all 2,000+ client users with mandatory TOTP two-factor authentication, backup codes, account recovery, login IP fingerprinting, and rate limiting to block account takeover attempts.
- Streamlined product and engineering workflows with AI, including a ticket-routing pipeline that automatically assigns 70% of incoming HubSpot support tickets to the owning engineer and an error-triage tool that turns production errors into ready-to-merge pull requests.

*Software Engineer I* *Jan 2024 – Aug 2024*

- Developed core backend services for the banking suite, supporting $10M+ in deposits through ACH transaction processing and ledger reconciliation.
- Redesigned legacy delinquency processing with scheduled materialized SQL views, cutting query latency from 10s to 10ms during peak morning traffic.

**Optiver** Chicago, IL

*Software Engineer Intern* *Jun 2023 – Aug 2023*

- Automated daily configuration updates in a core C#/WPF trading tool, saving an estimated 450+ hours annually across 20+ trading teams in Chicago, Amsterdam, and London.
- Eliminated regulatory reporting incidents by automating Dealerweb NAVX trade booking, removing manual entry errors in trade prices and quantities.

**University of Michigan** Ann Arbor, MI

*Teaching Assistant, Discrete Math (EECS 203)* *Aug 2020 – Dec 2023*

- Led exam management for a 1,200-student course, coordinating logistics and authoring exam questions.
- Taught 400+ students across 8 semesters through weekly discussion sections and office hours.

## Projects

**VibeSonar** | *TypeScript, SQLite, Claude Code hooks*

- Built an AI agent management dashboard adopted by the Revela engineering team, supporting concurrent agent sessions and a review workflow that presents proposed changes as commit plans with diffs and inline comments.

**Rage Platformer** | *Godot, GDScript* | Play Demo

- Developed and published a playable precision platformer featuring hidden traps, interactive mechanisms, and timing-based challenges across progressively difficult levels.

## Education

**University of Michigan** Ann Arbor, MI

*M.S. Computer Science & Engineering | GPA: 3.93/4.00* *Aug 2022 – Dec 2023*

*B.S. Computer Science, Minor in Mathematics | GPA: 3.91/4.00* *Aug 2019 – Apr 2022*

## Technical Skills

**Languages**: C#, Ruby, C++, Python, JavaScript/TypeScript, Java
**Tech Stack**: Ruby on Rails, PostgreSQL, Redis, React, WPF, Next.js, GraphQL, Sidekiq, RSpec, Git, EC2, S3
**AI & Automation**: Claude Code hooks, Anthropic API, Hermes Agent, MCP, GitHub Actions, HubSpot & Jira APIs
